SUMMARY

Tech Lead and Software Developer with 3+ years of experience building web platforms for government, healthcare, and financial clients, from presale through go-live. Develops with React.js, TypeScript, and CMS platforms across template-based and headless architectures, reviews source code, guides developers, and serves as the team's go-to CMS specialist, while also stepping into Product Owner and BA roles when projects need it. Regularly assigned by management to at-risk projects, renegotiating scope, controlling man-days, and bringing projects facing heavy losses back to a positive margin. Skilled at turning broad TORs into clear, deliverable scope and bridging business and technical teams so both sides make decisions with the same understanding.

EXPERIENCE

Sirisoft

Business Technology Consultant Senior Officer — **January 2026 - July 2026**

- **Geospatial Public Health & Accessibility Platform (2026)** Designed a feasible solution within a tight client budget during presale, helping win the project, then led delivery as Tech Lead with end-to-end ownership, managing man-days for every task across requirements, implementation, SIT, UAT, security testing, and go-live. Covered BA duties to gather requirements directly, stretching limited man-days across a scope larger than planned, while overseeing solution direction, reviewing source code and output, and building a webhook integration with the LINE Messaging API.
- **Corporate CMS Platform on WordPress (2026)** Proposed an open-source CMS to replace a product-based website that the client's own developers could not customize, winning the project, then led delivery as Tech Lead and the team's only CMS specialist, with expertise spanning template-hierarchy and headless architectures. Assigned tasks to junior developers, reviewed source code and output, managed man-days per task, validated task timelines with the PM against the agreed scope, and acted as the single point of contact for decision-makers across departments.

Business Technology Consultant — **January 2025 - December 2025**

- **Hospital Network Asset Management System (2025–2026)** Brought in as Product Owner to rescue an at-risk project after a delivery assessment revealed heavy projected losses. Renegotiated an urgent, loosely defined scope directly with client stakeholders, prioritizing deliverables so each part reached the client on time, and turned the project from a heavy projected loss into a positive margin. Scoped new modules for maintenance, repair, borrow/return, and asset value tracking, simplified redundant workflows in the existing system, and managed the outsourced vendor team, reviewing deliverables before client handover.
- **Agricultural Environmental Monitoring Dashboard (2025)** Served as Product Owner for a satellite-based dashboard supporting agricultural policy decisions, controlling scope and reviewing requirements, project documents such as SRS, SDS, UAT and security test, and development output before client delivery. Mid-project, identified a man-day shortfall, then reprioritized tasks, negotiated non-essential items out of scope with the client without disrupting the relationship, and closed the project within budget.

Software Developer — **June 2023 - December 2024**

- **Fund Management Instruction System (2024–2025)** Sent in to fill a critical BA gap on a large, understaffed fund management project from another team. Owned the instruction module, one of the project's core business modules, defining calculation rules for daily subscription, redemption, transfer, and fees for the trustee, and drove the SRS and SDS through client sign-off. Then moved into the Tech Lead role, assigning tasks to a mixed team of three vendor and two in-house developers and delivering the module on schedule through implementation, SIT, UAT, and go-live, while raising issues with proposed solutions to the PM for joint decisions and client updates.
- **Government Welfare & Finance System (2024)** Frontend Developer on an outsourced team helping a government client meet its contractual delivery deadline. As one of only two React developers on a largely Angular team, built UI and integrated APIs, and earned the Tech Lead's trust to handle the most complex tasks and debug and fix teammates' blocked code. The project became one of the team's top contributors to overall KPIs.
- **Government Website Redesign on Joomla (2023)** Led development of a government website redesign on Joomla as the only CMS-experienced member of an Angular-focused team. Drove research, proofs of concept, and implementation, recommended plugins (Google Analytics, multisite, complaint forms) to the Tech Lead, and built the UI to new UX research-driven designs. Extended the CMS beyond its built-in capabilities by embedding a third-party chatbot and building a custom webhook that connects it to the OpenAI API.

SKILLS

- Technical Skills: React.js, TypeScript, JavaScript, HTML, CSS, Tailwind, MUI, Ant Design, Redux, Node.js, WordPress, Joomla, Strapi, Docker, Keycloak, Git, Azure DevOps, Amazon EC2, Azure Virtual Machines, Ubuntu
- Soft Skills: Code Review, Team Leadership, Vendor Management, Requirements Analysis, Stakeholder Management, Cross-functional Communication, Team Collaboration

EDUCATION

Bachelor of Science in Information Technology

King Mongkut's Institute of Technology Ladkrabang • 2022
